

miniatur Conifer Tree Kits

Beacon's 3-in-1 Adhesive
Fast grab clear adhesive. 4-oz. bottle.
SC0314 3-in-1 Glue Adhesive \$3.99

The New **miniatur** Conifer Kits come with positional wire trunks which have a unique vinyl coating that simulates a weathered bark texture. Also with the kit is several sheets of pine horsetail foliage; enough to complete all the trees. We recommend using **3-in-1 Glue** as your primary adhesive.

1: Begin by gently twisting the wire branches giving the tree its shape and dimension.

2: Snip the Horsetail foliage to the necessary sizes and shapes according to the enclosed directions.

3: Apply **3-in-1** to the top portion of the branch.

4: Drape the appropriate length of Horsetail over the branch. Then pinch the material, folding it in half, making the pine bough.

5: Detail the top crown with small pieces of Horsetail.

6: With fine scissors, snip the boughs to give individual branch textures.
